### Associate
#### J P Morgan Chase India Pvt Ltd.

*02/2016 - Present*
*Investment Banking Front Office Technology*
*Achievements/Tasks*

- Electronic Trading Technology is the platform used for trading over 40 plus global exchanges, its also used for on-boarding of clients, reporting, STP feeds to middle and back-office systems etc for trade processing. Our technology stack includes trading system components from SunGard GT [formerly GL Trade], FIX and OMS applications from ULLink, trading applications from Trading Technologies and a wide variety of applications developed in-house. The applications are developed in Java and Fix technologies and the connectivity platform is setup on the Linux based machines. It involves the microservice based architecture for some of the components and some components are pushed on to the internal cloud.

- Design, implement and maintain the components of electronic trading platform.

- Some of the components are pushed on to the internal cloud.

- Working on to create different microservices to perform the required tasks.

- Level 3 support of the electronic trading application.

- Building tools for reporting.
